M4G / SETUP GUIDE

WM13

USB / XLR dynamic microphone

Connect by USB

Attach the microphone to the included boom arm and secure the desk clamp. Connect the supplied USB cable between the Type-C port on WM13 and a USB port on your computer.

Choose your audio device

Select WM13 as the microphone in your computer sound settings and in your recording, streaming or calling app. Make a short test recording, then adjust mic gain if the input is too quiet or clips.

Listen through headphones

Connect headphones to the 3.5 mm output in USB mode. Adjust headphone volume for listening comfort. Use the monitor-mix knob to balance your voice with computer playback.

Use the three knobs

Upper knob: microphone gain. Middle knob: headphone volume. Lower knob: monitor mix. These controls operate in the USB setup; use your interface controls when recording through XLR.

Connect by XLR

Connect WM13 to a compatible audio interface or mixer using an XLR cable, then select that interface in your recording app. The interface and XLR cable are not included. USB powers the digital controls and lighting.

M4G / SETUP GUIDE

WM13

USB / XLR dynamic microphone

Touch to mute

The mute control is blue when active and red when muted. Touch it to switch between the two states in USB mode. Check the indicator before starting your recording or call.

Set the lighting

Short-press the lighting control to change the RGB effect. Press and hold to switch lighting on or off. The lighting operates through USB.

Position your microphone

Bring the arm close to your seated position and speak towards the foam-covered microphone capsule. Adjust placement and gain while listening to a test recording.

Inside the supplied kit

WM13 microphone with foam cover, articulated boom arm and desk clamp, USB cable and printed user manual. Headphones, audio interface, XLR cable and a desktop base are not included.

If the microphone is not heard

Check the USB cable or interface connection, confirm the input selected in your app, check that mute is off and raise microphone gain gradually. For headphone playback, check the headphone connection, volume and monitor-mix setting.
